

# Walid Belal

## Sept 2020

## Summary

This tutorial shows how to install hadoop and IDE (IntelliJ Idea) on your laptop.

## Install Hadoop

You will be deploying a single Hadoop installation on your laptop. It is the easiest to configure and it uses your file system instead of HDFS. This type of deployment is suitable for test environments where you need to test code without getting to the complications of configuring Hadoop Cluster.

1-Download Hadoop from <https://hadoop.apache.org/releases.html>

### Download

Hadoop is released as source code tarballs with corresponding binary tarballs for convenience. The downloads are distributed via mirror sites and should be checked for tampering using GPG or SHA-512.

Version	Release date	Source download	Binary download	Release notes
2.10.0	2019 Oct 29	<a href="#">source (checksum signature)</a>	<a href="#">binary (checksum signature)</a>	<a href="#">Announcement</a>
3.1.3	2019 Oct 21	<a href="#">source (checksum signature)</a>	<a href="#">binary (checksum signature)</a>	<a href="#">Announcement</a>
3.2.1	2019 Sep 22	<a href="#">source (checksum signature)</a>	<a href="#">binary (checksum signature)</a>	<a href="#">Announcement</a>
3.1.2	2019 Feb 6	<a href="#">source (checksum signature)</a>	<a href="#">binary (checksum signature)</a>	<a href="#">Announcement</a>
2.9.2	2018 Nov 19	<a href="#">source (checksum signature)</a>	<a href="#">binary (checksum signature)</a>	<a href="#">Announcement</a>

Choose the binary release for version 3.1.3

2- Unpack the tar file into a folder on your laptop. For example /users/<your user>/Apps

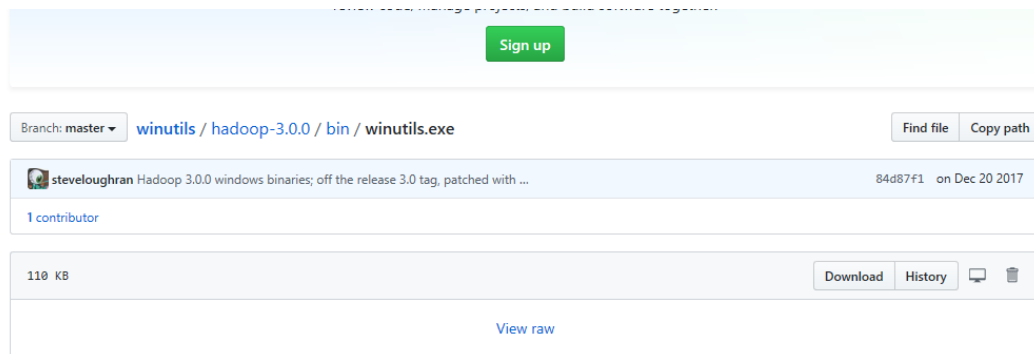

**Step 3, 4 and, 5 are only for windows clients**

3- download winutil.exe from <https://github.com/steveloughran/winutils>

Choose Hadoop 3

 <a href="#">hadoop-2.8.3/bin</a>	Windows binaries for hadoop-2.8.3	2 years ago
 <a href="#">hadoop-3.0.0/bin</a>	Hadoop 3.0.0 windows binaries; off the release 3.0 tag, patched with ...	2 years ago
 <a href="#">.gitattributes</a>	add gitattributes to try and keep line endings on the BAT files valid	3 years ago

Download winutil.exe to the bin folder of Hadoop. In the case of this document the folder is C:\Users\belalwa\AppData\Local\hadoop-3.1.3\bin

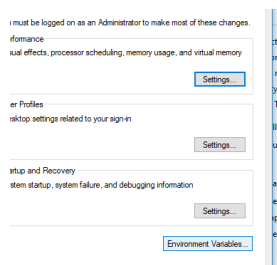

#### 4- Add Hadoop\_Home and JAVA\_HOME Environment variables

Go to Advanced System Settings from control panel > system and security > System

Choose environment variables and create a new system variable called HADOOP\_HOME and the value is the path of the directory directly above bin folder

Repeat the same step to create JAVA\_HOME variable

The value should be the home folder of your jdk 8

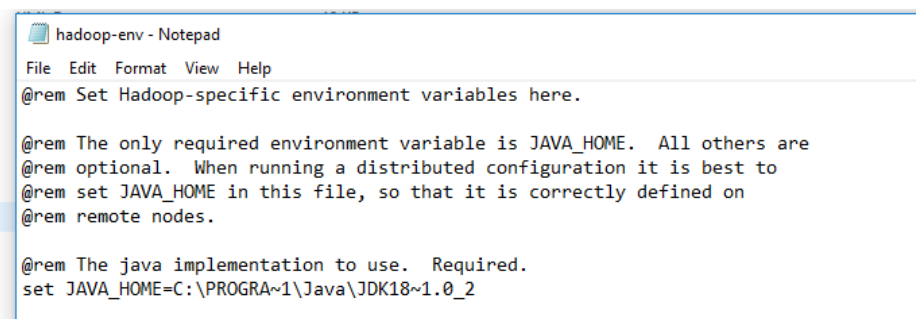

5- First perform following task to create short name;-

Most probable you will need to use the short name because Hadoop will give an error if there is a space in java home path. Below are the instructions on how to get the short name

cd to the java home folder then type "for %I in (.) do echo %~sI"  
The returned string is the short name

```
C:\Users\belalwa>cd C:\Program Files\Java\jdk1.8.0_241
C:\Program Files\Java\jdk1.8.0_241>for %I in (.) do echo %~sI
C:\Program Files\Java\jdk1.8.0_241>echo C:\PROGRA~1\Java\JDK18~1.0_2
C:\PROGRA~1\Java\JDK18~1.0_2
```

Copy short name provided above and then Open CopyHadoop-env.cmd with a text editor and change JAVA\_HOME parameter in the file to the short name of java home. (Don't change Hadoop-env.ssh file, only command file needs to be changed)

You will find hadoop-env.cmd file under \$HADOOP\_HOME\etc\hadoop

# Install IntelliJ IDEA

1- Download IntelliJ IDEA Community Edition

<https://www.jetbrains.com/idea/download/#section=windows>

Version: 2019.3.2  
Build: 193.6015.39  
20 January 2020  
[Release notes](#)

[System requirements](#)  
[Installation Instructions](#)  
[Other versions](#)

## Download IntelliJ IDEA

[Windows](#) [Mac](#) [Linux](#)

**Ultimate**  
For web and enterprise development

[Download](#) [.exe](#)

Free trial

**Community**  
For JVM and Android development

[Download](#) [.exe](#)

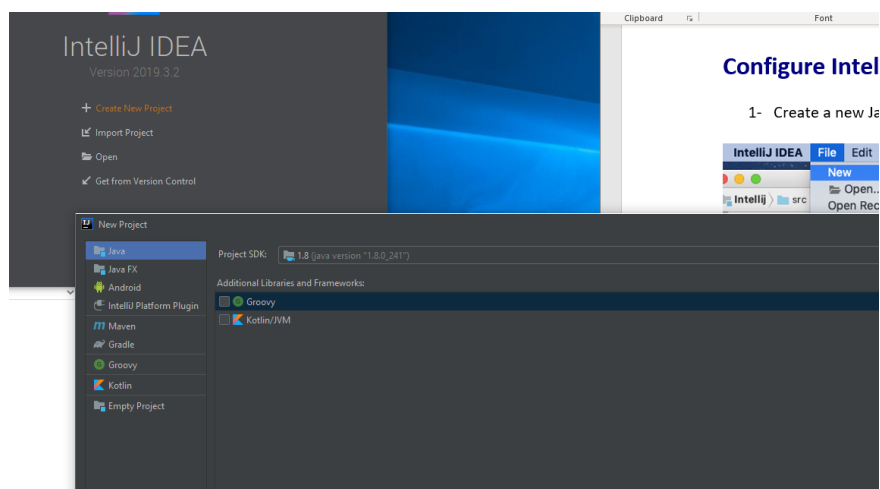

Free, open-source

License	Commercial	Open-source, Apache 2.0
Java, Kotlin, Groovy, Scala	✓	✓
Android	✓	✓

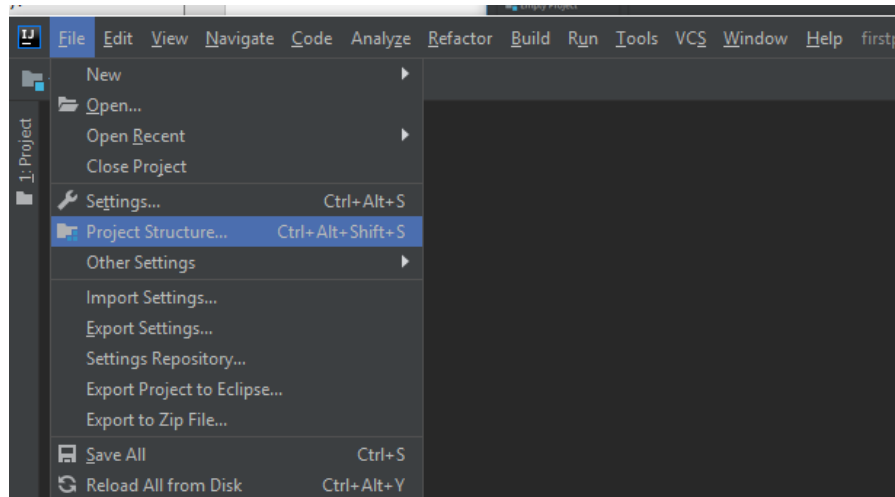

2- Install the software

# Configure IntelliJ IDEA

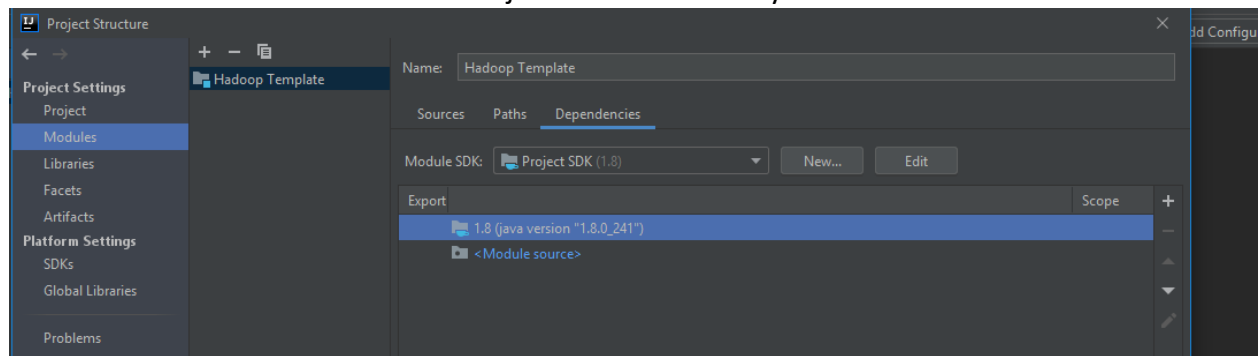

1- Create a new Java project in IntelliJ. Name the project HadoopProj and store it in your class folder

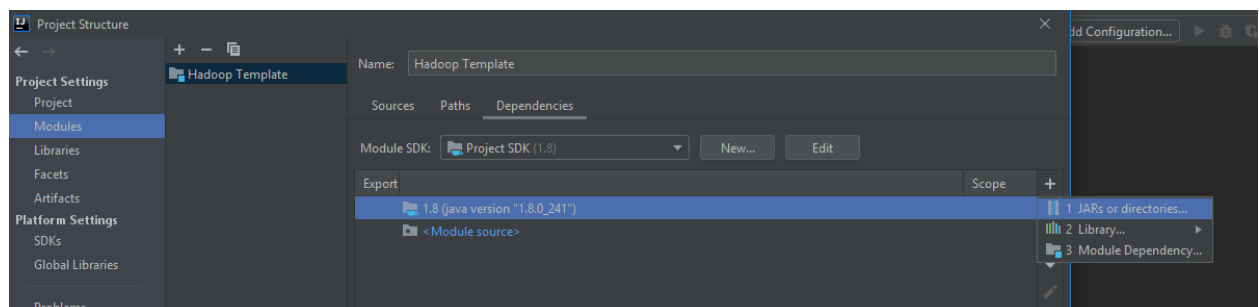

Add Hadoop module dependencies to the project

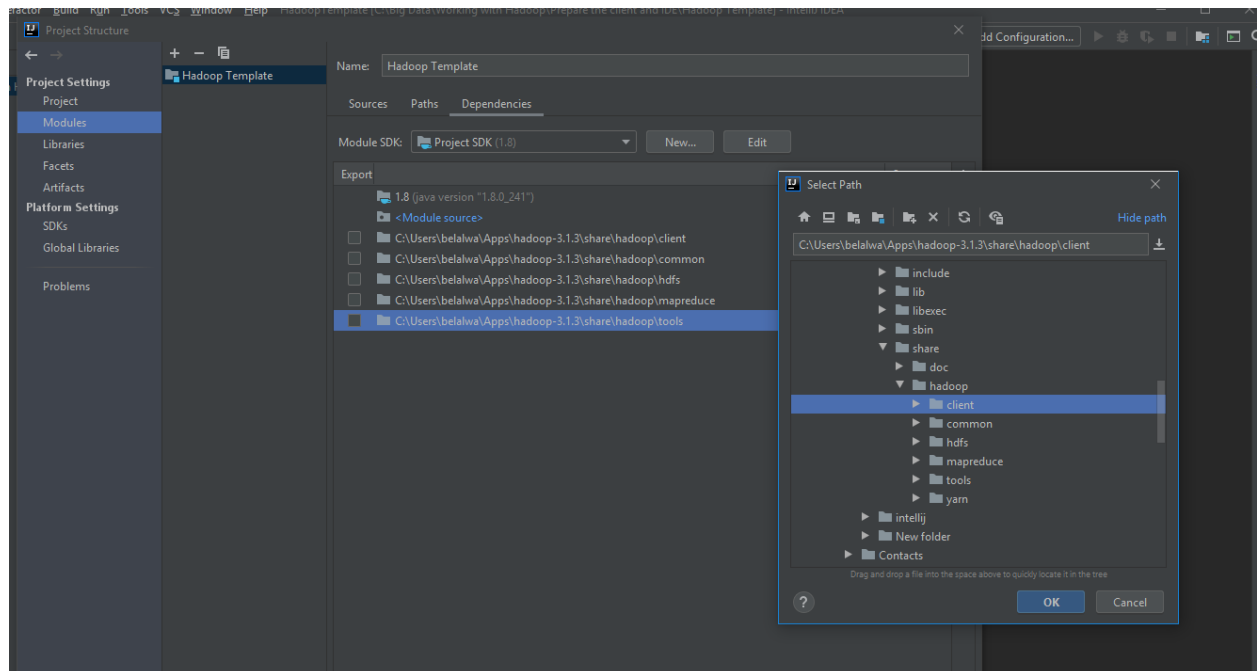

Choose Modules from the left and then Dependencies tab from the horizontal pane. Select whatever version of java sdk you have in your system. It can work with any jdk setup, need not be 1.8 version. Preferable it should be java 1.8 or above any version.

Click on the add button on the right of the window and Choose add JAR or Directory

Choose all the folders under share/Hadoop folder and click open.

Click ok to the Project Structure Window

Save the project and close it

Now your project has all the hadoop libraries that you need to work with
